BURSARY OPERATIONS · TRAINING PLAYBOOK

Bursary Playbook

A practical guide to running the bursary desk in Edus — from finding a family and keeping parent contacts correct, to importing fees already collected, taking money, and closing the day.

FOR	ROLE	VERSION
Bursary, accounts office and school-fee staff	**ROLE_BURSAR**	**1.0 · 14 November 2026**

> **How to use this playbook.** Read Part 1 before your first login. Work through Parts 2–9 with a trainer on a training tenant, never on the live school database. Keep Part 15 at the desk for daily reference. The exercises in Part 16 are the sign-off.

What is inside

1 What changed on 14 November 2026
2 How to use this playbook
3 Part 1 — Before you touch the system
4 Part 2 — Find a pupil or a parent
5 Part 3 — Parent contacts and family links (new)
6 Part 4 — Pupil records and Student Type (new)
7 Part 5 — Bulk Import: adding new pupils
8 Part 6 — Fees Import: opening balances (new)
9 Part 7 — Collecting money day to day
10 Part 8 — Scholarships and discounts
11 Part 9 — Reports the bursary uses
12 Part 10 — Expenses and income & expenditure
13 Part 11 — Promoting pupils
14 Part 12 — Close of day
15 Part 13 — Troubleshooting
16 Part 14 — Security, fraud and data quality
17 Part 15 — Quick reference

18 Part 16 — Training exercises (sign-off)

This playbook includes the 14 November 2026 release: Fees Import, family linking, parent titles ALH/HAJ/MAL, Student Type, phone search and the mobile layouts. It is internal training material, not a school-issued certificate or financial document.

Contents

18 sections. Each part explains what the screen is for, then the steps, then what success looks like.

What changed on 14 November 2026

CHANGE	WHAT IT MEANS FOR YOU	WHERE
Fees Import	Upload a CSV of fees the school already collected. Edus builds the term bill, posts the payment and leaves the correct outstanding balance.	**Finance → Fees Import**
Family linking by phone + name	When a parent's phone number already belongs to another parent, Edus checks whether a child shares a **surname or middle name**. If so, it offers to merge the two records into one family. If not, it refuses and names the children already on that number.	**Parents → Manage family → Edit**
Add a child to a family	A parent or guardian can say "this child is in my care". Search the pupil, tick, add. The parent gets a notice to confirm or report a mistake.	**Parents → Manage family → Add a pupil to this family**
Parent notices	Parents confirm a family change or write a note saying it is a mistake. Staff see disputed links in one queue.	**Parents → Family updates**
Student Type	Every pupil is **New intake** or **Returning**. Returning pupils are not billed one-time new-intake items.	**Students → pupil → Edit**, admission form, bulk CSV
Parent titles ALH / HAJ / MAL	Alhaji, Hajia and Mallam are now available when creating or editing a parent.	Parent form
Phone search fixed	A parent is found whether you type `0803…`, `803…`, `+234803…`, `234803…`, or only part of the number.	**Parents** search
Bulk Import Student Type	The bulk pupil CSV now accepts an optional 14th column, `Student Type (NEW/RETURNING)`. Blank means NEW.	**Admissions → Bulk Import**
Mobile layout	The parent, fee-import and student screens work at 320 px and 360 px. Tables scroll inside their own box; the page itself does not scroll sideways.	All screens

> **Two imports — do not confuse them. Bulk Import** creates *new pupil records*. **Fees Import** records *money already collected* for pupils who are already on roll. A pupil must exist before Fees Import can find them.

How to use this playbook

- Read **Part 1** before your first login.
- Work through **Parts 2–9** with a trainer on a **training tenant**, never on the live school database.
- Use **Part 15** as the quick reference at the desk.
- The **Training exercises** at the end are the sign-off: if you can do all of them without help, you are ready for live work.

Suggested 2-hour training plan

TIME	MODULE	ACTIVITY
0–10 min	Login and the bursary menu	Tour the menu, confirm your role
10–30 min	Parents, phone search and family linking	Find a parent, edit a contact, add a child
30–55 min	Student Type and Fees Import	Upload a 3-row CSV, read the preview, post it
55–75 min	Daily collection	Cash, payment slip, verify a transfer, receipt
75–95 min	Reports and close of day	Daily Collections, Outstanding Fees, Payment Register
95–120 min	Practice and sign-off	Complete the exercises at the end

Part 1 — Before you touch the system

1.1 Your login and your role

1. Open the school's Edus address in a browser. On a phone, Chrome is the safest choice.
2. Sign in with **your own** staff account. Never use another bursar's login and never share your password.
3. The bursar role sees these menu groups:

MENU GROUP	WHAT YOU CAN USE
Admissions	**Bulk Import**, **Students**, **Parents**, **Promote Students**
Finance	**Fee Schedule**, **Fees Import**, **Invoices**, **Payment Terminal**, **Verify Payments**, **Unmatched Transfers**, **Advance Payments**, **Discounts**, **Expenses**, **Income & Expenditure**
Reports	**Fee Reports**, **Daily Collections**, **Collections by Class**, **Outstanding Fees**, **Payment Register**, **Reconciliation**, **Online Payments**, **Class Fee Status**, **Expense Register**, **Income Statement**, **Discount Report**, **Application Fees**

Not on the bursar menu: New Admission (one child at a time), Applications, Settings, Staff, Classes, Sessions & Terms. Those belong to the administrator or admissions officer. If you cannot see a screen you need, ask the administrator — do not ask for a colleague's password.

1.2 The five rules that prevent most mistakes

1. **Preview before you post.** Fees Import writes nothing until you press **Post**. Read the preview first.
2. **One row = one pupil = the total already paid for the term.** It is not an instalment schedule and it is not one row per payment.
3. **One posted opening-balance batch per term.** To correct a posted batch, reverse it first, then upload the corrected file.
4. **Set Student Type before the bill is generated.** NEW and RETURNING pay different lines. Changing the type after money is on the bill does not re-price that bill.
5. **A phone number is a family key.** It is how siblings are matched and how a parent signs in. Verify the parent's identity before changing it.

1.3 The two imports — a one-minute comparison

	BULK IMPORT	FEES IMPORT
Purpose	Add new pupils to the school	Record fees already collected
Creates	Pupil record, parent link, enrolment, invoice (if **Generate Bills?** is ticked)	Payment, invoice status, outstanding balance
Use when	A new intake list arrives	The school collected cash/transfer/POS before using Edus
Pupil must exist?	No — this creates them	**Yes** — match by admission number and name
Menu	Admissions → **Bulk Import**	Finance → **Fees Import**
Rows	One per new pupil	One per pupil per term

	BULK IMPORT	FEES IMPORT
Danger	Duplicate admission numbers	Posting the same term twice

Part 2 — Find a pupil or a parent

2.1 Find a pupil

1. Go to **Admissions → Students**.
2. Search by **name** or **admission number**.
3. Filter by class or by fee status if you need a list.
4. Click the pupil's name to open the profile.

On the profile you can see the class, admission number, parent, siblings, fee ledger and the **Parent & Siblings** button. Use **ID Card** to print an ID card and the statement/PDF links for a family statement.

2.2 Find a parent — including the phone-number fix

Go to **Admissions → Parents**. The search box accepts:

- a parent's name;
- an email address;
- a child's name;
- a phone number in **any** of these shapes:
  - `08039658200`
  - `8039658200`
  - `+2348039658200`
  - `2348039658200`
  - the last four or five digits, e.g. `58200`.

You no longer need to remember whether the leading zero was stored. Type the number the way the parent wrote it and search.

Expected result: one row per parent, showing phone, email/login, and every child linked to that parent. If a parent has no login, the row says **No login account**. If no parent matches, try the child's name or the last digits of the phone.

> **Tip:** if a parent says "I have two children in the school", search the phone once. Both children should appear in the **Children** column. If only one appears, use **Manage family** to see the family page and add the missing child (Part 3.4).

2.3 Titles ALH, HAJ and MAL

The parent form now offers **ALH** (Alhaji), **HAJ** (Hajia) and **MAL** (Mallam), in addition to the existing titles. Use the title the parent uses; it is saved on the parent record and used wherever the parent's designation is printed. The directory search still uses the parent's name, phone, email or child's name — not the title.

Part 3 — Parent contacts and family links (new)

3.1 Open a family

1. **Admissions → Parents**.
2. Search by phone, name or child.
3. Click the parent's name, or the **Manage family** button.

The family page shows:

- **Contact details** — phone, alternate phone, email/login, address.
- **Pupils in this family** — every child, their class and admission number.
- **Add a pupil to this family** — search and move a child here.
- **Family updates** — notices sent to the parent and their answers.

3.2 Change a parent's contact details

1. On the family page, press **Edit** in the **Contact details** card.
2. Change the title, name, phone, alternate phone, email, relationship, occupation or address.
3. Press **Save contact details**.

Expected result: you return to the family page with a green message. The new number is stored in one standard shape and is used for **every child in that family**.

> **Changing a phone changes the family, not one child.** All siblings under that parent are reached on the new number. Confirm with the parent before saving.

If the parent signs in with a phone-derived address (for example `8039658200@edus.ng`), Edus updates that login when the phone changes. A personal email login is left unchanged.

If the new number already belongs to another parent, the save does not happen straight away — see 3.3.

3.3 "Another child already has this number" — the merge preview

This is the new sibling-merge flow. It runs when the phone number you type is already held by a **different** parent record.

1. After you press save, Edus checks the other parent's children.
2. It compares names with the children under the parent you are editing.
3. A match must be a shared **surname** or a non-empty **middle name**. A blank middle name never matches another blank middle name.

If one child matches, you see a panel:

> **Another child already has this number** *Other parent's name* already holds *the number* and has: … The names match on **surname "Bello"** (or **middle name "Ibrahim"**), so the system treats these as one family. Saving will move *your children* under *the other parent*. The other parent record is removed and one family login is kept. [ ] I confirm this is the same family.

- Nothing has been saved at this point.

- Read the names carefully. If they are the same family, tick the box and press **Merge and save contact**.
- **Expected result:** all children are under one parent, the duplicate parent record is removed, and one login is kept. The family page opens on the surviving parent.

If no child shares a surname or middle name, nothing is saved. The phone field shows a message naming the other parent and the children already on that number. This is deliberate: two families can share a handset (an office phone or a relative's phone), and merging them would put a stranger's child on the wrong bill.

What to do then:

- If the number was typed wrongly, correct it and save again.
- If it really is the same family but the children have different surnames (for example, a remarriage), do **not** force a merge. Open the correct parent's family page and use **Add a pupil to this family** (3.4), then ask the administrator to tidy the empty duplicate record.

If both parent records already have a dedicated bank account (virtual account), Edus refuses the merge so that neither bank account is orphaned. Use **Add a pupil to this family** instead.

If more than one other parent record shares a child's name, Edus also refuses and tells you to use **Add a pupil** on the correct family. Do not guess which record is the right one.

3.4 Add a child to a family — the guardian case

Use this when a parent, uncle, aunt or guardian says: "This child is in my care, but was registered under someone else."

1. Open the **correct** parent's family page.
2. In **Add a pupil to this family**, search by name or admission number.
3. The results show the child's current class, admission number, and the parent they are currently under.
4. Tick the child (or children) to move.
5. Press **Add selected to this family**.

Expected result:

- The child moves to this parent immediately.
- The parent receives a notice in their portal: a new pupil has been added to their family.
- The parent can press **This is correct** or **This is a mistake — write a note**.

> **This changes who is responsible for the bill.** Before moving a child, ask for evidence: a written request, a guardianship letter, or confirmation from the school management. Do not move a child because someone at the gate says so.

3.5 Family updates — the staff queue

Go to **Admissions → Parents → Family updates**.

Tabs:

TAB	MEANING
Reported by parents	The parent says the link is wrong. Read the note and act.
Awaiting parent	The notice was sent; the parent has not answered yet.
Confirmed	The parent agrees with the change.

TAB	MEANING
All	Every notice.

Each card shows the parent, phone, pupil, the notice text and the parent's note. A reported link needs the office: contact the parent, check the evidence, and correct the family. Do not ignore a reported notice.

3.6 What not to do with families

- Do **not** create a second parent record with the same phone number to "fix" a sibling. Use the family page.
- Do **not** change a child's surname or middle name just to make a merge work. Names belong to the pupil's records.
- Do **not** use **Add a pupil** to fix a wrong admission number or a wrong class. Correct the pupil record or the enrolment instead.
- Do **not** move a child between families without evidence and without telling the parent — the parent will see the notice, and a disputed link comes back to the office.

Part 4 — Pupil records and Student Type (new)

4.1 Open and edit a pupil

1. **Admissions → Students**.
2. Search and open the pupil.
3. Press **Edit Profile**.
4. The form includes **Student Type**.

4.2 New intake vs returning

STUDENT TYPE	WHO IT IS	WHAT EDUS BILLS
New intake (`NEW`)	A pupil joining the school for the first time	Recurring items **plus** one-time new-intake items (uniform, books, ID card, admission form — whatever the school marks as one-time)
Returning (`RETURNING`)	A pupil who was already in the school	Recurring items only; **no** one-time new-intake items

A `SESSION` item is billed only in the **first term** of the session, regardless of type.

Set this correctly before generating an invoice or posting a Fees Import. If the type is wrong, the bill is wrong.

4.3 Changing Student Type later

- If the pupil has **no payment** against the term invoice, a Fees Import row for that pupil can rebuild the unpaid invoice using the file's type.
- If money is already on the bill, the bill is treated as history and is **not** re-priced automatically. Stop and ask the administrator before changing the type.
- Changing the type on the pupil form alone corrects the record; it does not re-price an existing bill.

4.4 Student Type in Bulk Import

The bulk pupil CSV now has an optional 14th column: `Student Type (NEW/RETURNING)`. Blank means **NEW**, which matches the old template. For a returning intake, fill `RETURNING` so the one-time items are not billed.

> **Use the exact words `NEW` or `RETURNING`.** In Bulk Import, any other value (for example `RETURNNG`) is treated as NEW, so a returning pupil can be billed the one-time items. Fees Import is stricter and rejects a bad value with a row error.

Part 5 — Bulk Import: adding new pupils

Menu: Admissions → **Bulk Import**

Use this for a new intake list. It creates pupil records, links siblings by parent phone, enrols the pupil, and can generate bills.

5.1 Download the template

Press **Download CSV Template**. The file has **14 columns**:

#	COLUMN	NOTES
1	First Name	Required
2	Middle Name	Optional
3	Last Name	Required
4	Gender (M/F)	`M` or `F`
5	DOB (YYYY-MM-DD)	e.g. `2015-01-01`
6	Religion	Optional
7	Blood Group	Optional
8	Genotype	Optional
9	Home Town	Optional
10	Admission Number	Leave blank to auto-generate
11	Class Name	Must match an existing class exactly
12	Parent Name	Parent/guardian full name
13	Parent Phone	**Required** — this is how siblings are matched
14	Student Type (NEW/RETURNING)	Optional; blank = NEW

5.2 Step by step

1. Fill the file, one row per new pupil.
2. Save as **CSV UTF-8** (Excel: *Save As → CSV UTF-8 (Comma delimited)*).
3. Choose the **Term**.
4. Tick **Generate Bills?** if you want invoices created now.
5. Choose the file and press **Upload & Process**.
6. Read the import report.

A bad row does not destroy the file. Edus imports the good rows and reports the bad ones with their row number. Fix only the rejected rows and upload them again.

5.3 Common Bulk Import errors

MESSAGE / SYMPTOM	CAUSE	FIX
"Class '…' not found"	Class name does not match the class list	Copy the exact class name
"no parent phone number"	Parent phone blank	Add the phone; siblings depend on it

MESSAGE / SYMPTOM	CAUSE	FIX
"admission number ... belongs to ..."	Number already used by another pupil	Use the correct number or leave it blank
"row ... of this file already uses it"	Same admission number twice in the file	Remove the duplicate
"Format Error: Template requires 12 columns"	File has too few columns	Download a fresh template
Names or dates look wrong	Excel changed the format	Save as CSV UTF-8; use `YYYY-MM-DD`
Imported names show `Ã©` or `â€™`	File was not UTF-8	Re-save as CSV UTF-8 and re-upload

Part 6 — Fees Import: opening balances (new)

Menu: Finance → **Fees Import**

6.1 What Fees Import does

It imports fees the school has **already collected by hand** — cash, transfer, POS or cheque — for pupils already on roll.

For each valid row, Edus:

1. finds the pupil by admission number, then checks the first name plus either the middle name or the surname, in that class;
2. builds the term bill from the **Fee Schedule**, using the pupil's **Student Type** and any scholarship;
3. posts the **Amount Paid** as a confirmed payment;
4. marks the invoice **PAID**, **PARTIAL** or **UNPAID**;
5. leaves the outstanding balance on the family statement;
6. records any overpayment as an **advance credit** for the pupil.

It does not create pupils, create fee amounts, or accept one row per instalment.

6.2 Before you upload — six checks

1. **The term is the correct term.** The term you choose is the term billed.
2. **The Fee Schedule is complete** for every class in the file. A class with no fees produces an error row.
3. **The pupils exist** and their class matches the file.
4. **Student Type is correct** for each pupil.
5. **Scholarships are already assigned** in **Finance → Discounts**. If an invoice exists, the import reads its discount; if not, the rule is applied when the bill is priced.
6. **No other opening-balance batch is posted for this term.** If one is, reverse it first (6.11).

To check the Fee Schedule: go to **Finance → Fee Schedule**, choose the term, and confirm every class in your file has its tuition and other fee lines. Use **Edit Prices** to correct an amount, or **Per arm** when one arm costs more. If a whole fee item is missing, ask the administrator. An empty schedule is the most common reason a whole Fees Import is skipped.

6.3 Build the file from a class roster

1. In **Fees Import**, find **Build the file from a class roster**.
2. Choose the **Class**.
3. Press **Download roster CSV**.

The download is pre-filled with:

`Admission Number, First Name, Middle Name, Surname, Class Name, Student Type, Amount Paid, Payment Date, Payment Method, Payment Reference, Note`

The admission number, all three name columns and the class are filled from the class list. Student Type comes from the pupil record. The bursary fills **Amount Paid** and the payment details.

> **Middle Name is there for tracing.** Some pupils were entered with a middle name but no surname. The roster now shows First, Middle and Surname together, so the row can still be identified before it is uploaded.

> **Check the pre-filled Student Type.** It comes from the pupil record. If the school has not maintained the field, a returning pupil may still say `NEW`. Correct it in the file before posting, or the one-time new-intake items will be billed.

6.4 The eleven columns

COLUMN	REQUIRED?	WHAT TO ENTER
Admission Number	**Yes**	The pupil's exact admission number, e.g. `24/001`. This is the key.
First Name	**Yes**	As on the pupil record
Middle Name	No	As on the pupil record. Used when the surname is blank or when the two are swapped.
Surname	**Yes***	As on the pupil record. May be blank when a middle name is supplied.
Class Name	**Yes**	Exact class, e.g. `JSS 1A`
Student Type	**Yes**	`NEW` or `RETURNING`
Amount Paid	**Yes**	**Total already collected for the term**, not an instalment. Blank means `0`.
Payment Date	No	`YYYY-MM-DD` or `DD/MM/YYYY`. Blank = today.
Payment Method	No	`CASH` (default), `TRANSFER`, `POS`, `CHEQUE`
Payment Reference	No	Teller, receipt or transfer reference
Note	No	A short note; it is added to the payment record

* At least one of **Middle Name** or **Surname** must carry a value; both blank is a row error.

How a pupil is matched: the **Admission Number is the key**. Edus then requires the **First Name** plus **either the Middle Name or the Surname**. The two may be swapped or one may be blank — the import accepts whichever one matches the pupil record. If the admission number is not found, Edus can still fall back to the name plus class, but it marks that row with a warning. Check the number before posting.

The column headings are flexible (for example `Admission No`, `Last Name`, `Method`), but the safest file is the template with its headings unchanged.

6.5 Amount Paid — the rule that causes most errors

- Enter the **total** the school has collected for that pupil for that term.
  - Parent paid 20,000 in September and 17,500 in October → enter **37500**.
  - Do **not** enter 17500 as a second instalment.
- Enter `0` or leave it blank if the pupil has paid nothing.
- Do **not** use thousands separators: write `37500`, not `37,500`.
- `₦` signs and spaces are ignored. Up to two decimal places are accepted.
- A negative amount is rejected.
- If the total is **more than the term bill**, the extra becomes an **Advance Payment** credit for that pupil.
- Edus compares the file total with what is **already recorded**. It posts only the difference. If ₦10,000 is already on the invoice and the file says ₦37,500, the import posts ₦27,500.

> **The file is a snapshot.** If a parent pays more after you prepared the CSV but before you post it, either update **Amount Paid** to the new total, or post the file first and then record the extra payment in **Payment Terminal**. Never do both for the same money.

6.6 Upload and preview

1. Choose the **Term**.
2. Choose the CSV file.
3. Press **Preview import**.

Nothing is posted. The preview is a draft. Re-uploading the exact same file reuses the existing preview instead of creating a duplicate.

If the file is missing a required column, nothing is imported and the page lists the missing column(s). Download a fresh template and copy your data into it.

6.7 Read the preview

The summary shows:

- **Due** — total term bill for all valid rows;
- **Collected** — total Amount Paid;
- **Outstanding** — Due − Collected;
- **Ready** — rows that will post;
- **Skipped** — rows with a red error;
- **Warnings** — rows that will post but need a second look.

For each pupil, check:

- the name and admission number;
- the class and Student Type;
- **Due**, **Paid** and **Outstanding**;
- the invoice number (blank means a new invoice will be created);
- any **Scholarship** label;
- warnings and errors.

Red error = the row will not post. Yellow warning = the row will post, but read it. For example, "the pupil record says NEW, the file says RETURNING — the record will be corrected" is a warning: **posting will overwrite the pupil's type**. If the file is wrong, stop and correct the CSV before posting.

6.8 Post the batch

When the preview is correct, press **Post N rows**.

- Only ready rows are posted. Skipped rows are left out and reported.
- The posting runs as one transaction; a database failure rolls the whole batch back. A row whose pupil or class disappeared is skipped and named.
- You cannot post a second opening-balance batch for the same term. If one exists, Edus names the posted batch and tells you to reverse it first.

Expected result: the batch status becomes **Posted**, with counts of posted and skipped rows. Each posted pupil now has:

- the term invoice (created or updated);
- a confirmed payment with the amount paid;
- the correct status: `PAID`, `PARTIAL` or `UNPAID`;
- an outstanding balance on the family statement;
- an advance credit if the payment was above the bill.

6.9 After posting

- Press **Download rows CSV** to keep the result. It contains the pupil, class, due, paid, outstanding, invoice number, status, warnings and errors.
- Open a pupil's profile or the **Payment Register** to confirm the payment.
- Do **not** change the fee schedule expecting posted bills to change. A posted bill is history.
- Keep the original upload file and the batch number in your records.

6.10 Where the bills live

Finance → Invoices is the school's bill ledger.

1. Filter by **Unpaid**, **Partial** or **Fully Paid**.
2. Search by pupil name or invoice number.
3. Read the filtered totals at the bottom: total billed, paid and balance.
4. Press **Manage** to open an invoice: its lines, payments, balance, **Print** and **Generate Payment Slip**.

If a pupil has no invoice yet, open **Payment Terminal**, search the pupil and press **Generate Invoice Now**. Edus builds it from the Fee Schedule and the pupil's Student Type. Do not create a second invoice by hand — the system reuses the existing one for the term.

6.11 Reverse a batch

Only a **tenant super admin** sees **Reverse this batch**.

1. Open the posted batch.
2. Press **Reverse this batch** and confirm.
3. Edus:
   - removes the payments created by the batch;
   - restores each invoice's paid amount and status;
   - removes unused overpayment credits from the batch;
   - restores the pupil's previous Student Type;
   - marks the batch **Reversed**.

It refuses if an overpayment credit from the batch has already been used. Reverse the payments that used the credit first, then reverse the batch.

After reversal, upload the corrected file. The reversed batch stays on record.

6.12 Scholarships and discounts

Assign scholarships **before** the Fees Import.

1. Go to **Finance → Discounts**.
2. Use **Manage Rules** to create, **edit** or **delete** a rule (percentage or fixed amount). Editing a rule re-prices the open bills that use it; an assigned rule must be revoked from its pupils before it can be deleted.
3. On the **Scholarship Board**, search the pupil, select the rule and confirm.
4. Read the **Bill effect** column:
   - a green `₦gross → ₦net` means the rule reached the bill;
   - "No open bill" means it will apply to the next bill;
   - "Not applied yet" means revoke and re-assign to re-price the bill.

Scholarships reduce **tuition only**, not every fee line, by default. The scope belongs to the **rule**, not to the pupil: tick **Apply to grand total** on the rule and every pupil on that rule has the percentage taken off the grand total due. Untick it and every pupil on that rule is back to tuition only. There is no per-pupil override — if two children must be treated differently, give them two rules.

The percentage is then measured against the **grand total due** — tuition, levies, books and one-time items together — so a 100% award on the grand total makes the total due ₦0. Every row on the board is labelled **Grand total** or **Tuition only**, so you can see which scope is in force.

In the Fees Import preview, a discounted pupil shows `Scholarship: <label>` and the **Due** is already net of the discount. If the discount is missing, stop and fix the scholarship before posting.

6.13 Worked examples (illustrative amounts)

SITUATION	TERM DUE	AMOUNT PAID IN FILE	RESULT
New pupil, part payment	₦62,500	₦37,500	**PARTIAL** — ₦25,000 outstanding
Returning pupil, full payment	₦50,000	₦50,000	**PAID** — ₦0 outstanding
Returning pupil, tuition scholarship already applied	₦25,000 due after discount	₦25,000	**PAID** — ₦0 outstanding
Parent paid above the bill	₦50,000	₦60,000	**PAID** — ₦10,000 advance credit
Nothing paid yet	₦50,000	`0` or blank	**UNPAID** — ₦50,000 outstanding
Wrong student type in file	₦62,500 as NEW, but pupil is RETURNING	any	Warning; posting corrects the type and rebuilds an **unpaid** bill

6.14 Common Fees Import errors and fixes

MESSAGE / SYMPTOM	WHAT IT MEANS	WHAT TO DO
"The file is missing the … column"	Template headings were changed or deleted	Download a fresh template; keep the headings
"student type '…' is not NEW or RETURNING"	Typo such as `RETURNNG`	Use `NEW` or `RETURNING`

MESSAGE / SYMPTOM	WHAT IT MEANS	WHAT TO DO
"amount paid '…' has a thousands separator"	`37,500` was typed	Write `37500`
"amount paid '…' is not a number"	Text, or more than two decimals	Write `37500` or `37500.00`
"amount paid cannot be negative"	A minus sign	Enter the real amount
"class '…' was not found"	Class name does not match	Copy the exact class name from the class list
"Row … and row … both name …"	The same admission number appears twice	Keep one row per pupil; remove the duplicate
"admission number … belongs to …, but the row says …"	Admission number and names do not match; rows may be out of order	Check the row against the pupil record
"enter a surname or a middle name"	Both name fields are blank	Fill in whichever name the pupil record uses
"… is in … but the file says …"	Pupil's class is different from the file	Correct the class or the enrolment
"no fees are set for … this term"	Fee Schedule is empty for that class	Ask the administrator/bursar to complete the Fee Schedule
"already has … recorded … which is more than the file says"	A previous payment or import is higher than this file	Reverse the earlier import/payment first
"An opening-balance import for … was already posted"	One posted batch per term	Open the named batch and reverse it first
"This batch has already been posted or reversed"	You opened an old batch	Open the preview/current batch instead
All rows skipped	Missing Fee Schedule, wrong term, or wrong class names	Read the red errors; start with the first one
"Post" button missing	No valid rows	Fix the red errors and re-upload

6.15 Before you press Post — checklist

- [ ] The term is the correct term.
- [ ] Every class in the file has a Fee Schedule.
- [ ] The pupils exist; the admission number, first name and one of middle/surname match.
- [ ] Student Type is right for every row.
- [ ] Scholarships are assigned and visible in **Due**.
- [ ] Amount Paid is the **total** collected, with no commas.
- [ ] The summary totals agree with your own control sheet.
- [ ] Every red error is understood; skipped rows are expected.
- [ ] No other posted batch exists for this term.
- [ ] You have kept the source CSV.

Part 7 — Collecting money day to day

7.1 Cash at the office

1. **Finance → Payment Terminal**.
2. Search the pupil by name or admission number.
3. Open the pupil's invoice.
4. Check the **Balance to Pay**.
5. Enter the amount received.
6. Press **Confirm Cash Payment**.
7. The receipt opens. Print it or give the parent the receipt number.

Rules:

- Count the cash before you type the amount.
- Enter only what you received.
- If the parent is paying **ahead** of the bill, use **Advance Payments** instead of forcing an overpayment on the invoice.
- Never record a cash payment for money you have not counted.

7.2 Bank transfer — generate a slip

1. Open the pupil's invoice in **Payment Terminal**.
2. Press **Generate Payment Slip**.
3. Give the parent the slip code/reference and the school account details.
4. The payment stays **Pending** until the school verifies it.

7.3 Verify a transfer

1. **Finance → Verify Payments**.
2. Search by name, admission number, slip code, phone, invoice or amount.
3. Open the parent's proof if one was uploaded.
4. Match the payment in the school's bank app.
5. Type the **amount you saw in the bank**.
6. If the bank amount differs from the slip, tick **The bank shows a different amount from the slip** and enter the real amount.
7. Press **Approve payment**.

Expected result: the payment becomes confirmed, the invoice balance reduces, and the parent can see the confirmed payment in the portal. A slip cannot be confirmed against an invoice that is already fully paid — that slip is cancelled and you see a message.

> **Do not approve from a screenshot alone.** The money must be visible in the school's bank account or Paystack balance.

7.4 Receipts and reprints

- A cash payment opens the **receipt** immediately.
- To reprint, go to **Reports → Payment Register**, find the payment and open the receipt.
- The receipt is the parent's proof. Never issue a handwritten receipt for a payment that is in Edus.

7.5 Unmatched transfers

Finance → Unmatched Transfers holds money that reached a family's dedicated account but could not be matched to a bill.

1. Read the amount, date, sender and the parent/account.
2. Type the **invoice number** to apply it.
3. Press **Apply ₦…**.

A transfer larger than the bill is refused — place the correct part first, then deal with the rest. **Mark for refund** only records the decision; the refund is made at Paystack.

7.6 Advance Payments

Use this when a parent pays **before** the bill exists, or pays more than the current bill.

1. **Finance → Advance Payments**.
2. Search the pupil by name or admission number and select the pupil.
3. Enter the **amount received**, the method, the date and what it covers (for example “3 sessions, 2026/2027–2028/2029”).
4. Write a clear **remark for the audit**.
5. Press **Record advance**.

The credit is applied to every invoice raised for that pupil afterwards. Do not manually add the same money again when the new bill appears.

7.7 Online payments — what to tell a parent

- An **online school-fee payment** carries a flat **₦750** processing charge on each payment, whether it is a part payment or the full balance.
- The school still receives its **full school fee**. The charge covers Paystack's transfer cost and Edus handling; it is not deducted from the school's fee.
- The **application fee** (for a new application, before the form) is different: the school's form fee, plus Paystack's card cost, plus **₦350**.
- The school can switch the online charge off in Settings. If it is off, the parent pays only the invoice.
- Never add the ₦750 manually to a cash or office transfer. It belongs to online checkout only.

Part 8 — Scholarships and discounts

1. **Finance → Discounts**.
2. **Manage Rules** to create, edit or delete a rule: name, percentage or fixed amount, value. A rule in use is protected from deletion.
3. **Scholarship Board** to assign it to a pupil.
4. Check **Bill effect**:
   - green `₦gross → ₦net` — applied to the open bill;
   - "No open bill" — it will apply to the next bill;
   - "Not applied yet" — revoke and re-assign.

Rules:

- Get the approved scholarship list from management before assigning.
- Confirm the pupil by **admission number**, not by name alone.
- A scholarship reduces **tuition** only unless the rule has **Apply to all fee items** ticked. A 100% rule with that box ticked waives every fee item.
- Assign scholarships **before** generating invoices or running Fees Import.
- To correct a wrong scholarship, revoke it and re-assign the correct rule; do not edit the invoice by hand.

Part 9 — Reports the bursary uses

9.1 Daily

REPORT	USE
Reports → Daily Collections	Total collected today, split by method
Payment Register	Every confirmed payment; reprint a receipt
Verify Payments	Clear the pending transfer queue
Unmatched Transfers	Place money that did not match a bill

9.2 Weekly

REPORT	USE
Outstanding Fees	Debtors list; print or download a family statement
Collections by Class	Which classes are paying, which are behind
Class Fee Status	One matrix of pupils × fee status for a class
Fee Reports	Term summary of billed, collected and outstanding

9.3 Monthly / end of term

REPORT	USE
Reconciliation	Compare Edus collections with the bank/Paystack
Online Payments	Online collections and payouts to the school
Discount Report	Every scholarship and its value
Application Fees	Application-fee income
Expense Register	All expenses in the period
Income Statement / Income & Expenditure	Income against expenditure for the period

How to run a report: choose the date range or term, apply the filters, then use the **CSV** or **PDF** button where offered. Keep the export with your monthly accounts.

> **Outstanding Fees** is the list to use when chasing parents. Open a pupil's statement from the report or the pupil profile; it shows every invoice, payment and balance.

Part 10 — Expenses and income & expenditure

1. **Finance → Expenses**.
2. Use **Manage Categories** if the category does not exist, then choose it (for example diesel, repairs, transport).
3. Enter the date, amount, payee and a clear description.
4. Press **Save Record** and keep the receipt.
5. **Finance → Income & Expenditure** for the period report.

The income statement counts **confirmed** payments only. A pending transfer is not income yet.

Part 11 — Promoting pupils

Admissions → Promote Students

1. Choose the current class/session.
2. Select the pupils to promote.
3. Choose the target class for the new session.
4. Mark any repeaters so they stay in the same class.
5. Generate the new session's invoices if that is the school's practice.

Before promoting: confirm the new session and terms exist, classes are created, and the fee schedule for the new term is ready. Promotion is a management decision; do not promote a whole class without the principal's list.

Part 12 — Close of day

- [ ] Count the cash and agree it with the receipts in Edus.
- [ ] Clear **Verify Payments**; leave nothing pending that you have seen in the bank.
- [ ] Check **Unmatched Transfers**; place or note every item.
- [ ] Record today's expenses with their receipts.
- [ ] Confirm today's Fees Import (if any) is **Posted**, not left as a preview.
- [ ] File the source CSV and the batch number.
- [ ] Log out, especially on a shared computer.

Close of term:

- [ ] Every class has a complete Fee Schedule for the term.
- [ ] The opening-balance import is posted, or you have recorded why not.
- [ ] Scholarships are assigned and the Discount Report agrees.
- [ ] Outstanding Fees is exported for management.
- [ ] Payment Register and Daily Collections are exported for the accounts file.
- [ ] Any reversed batch has a written reason on file.

Part 13 — Troubleshooting

PROBLEM	LIKELY CAUSE	WHAT TO DO
Parent not found by phone	Number typed with spaces or a country code in an unexpected way	Try the national digits, the last 4–5 digits, or the child's name
Parent title missing	Old record was created before ALH/HAJ/MAL	Edit the parent and choose the title
Merge panel will not save	Confirmation box not ticked	Tick **I confirm this is the same family**, then save
"We only join two parent records when a child shares a surname or middle name"	Shared phone, no name match	Correct the number; if genuinely one family, use **Add a pupil**
Merge refused because of virtual accounts	Both records have dedicated bank accounts	Use **Add a pupil** on the correct family
Child is under the wrong parent	Old admission or a data-entry error	**Add a pupil to this family** on the correct parent; parent confirms
Parent says they never added a child	A staff member moved the pupil	**Parents → Family updates → Reported by parents**; read the note and fix
Fees Import "Post" button missing	No valid rows	Read the red errors; fix and re-upload
"One posted batch per term"	A batch is already posted	Open the named batch; reverse it first
"No fees are set for this class this term"	Fee Schedule incomplete	Complete the Fee Schedule, then re-preview
Amount paid rejected	Comma, negative, or text	Write `37500` or `37500.00`
Row skipped because admission number belongs to another pupil	Wrong number or rows out of order	Check the pupil record and the row
Parent's balance looks wrong	Wrong Student Type, missing scholarship, or an earlier payment	Check the pupil, the invoice and the Fee Import batch before changing anything
Receipt needed again	Payment already confirmed	**Payment Register** → open the payment → receipt
Pending transfer not showing	Already confirmed, or wrong term/invoice	Check **Payment Register**; confirm you are on the right pupil
Page looks cramped on a phone	Wide table	Scroll the table inside its box; the page should not scroll sideways. If it does, report it

When to escalate to the administrator instead of fixing it yourself:

- a payment is on the wrong pupil or the wrong invoice;
- a posted Fees Import batch must be reversed;
- a parent record has two dedicated bank accounts;
- the Fee Schedule is missing or wrong for a class;
- a scholarship must be changed after money has been posted;
- a parent disputes a family link and the evidence is unclear;
- you see a duplicate parent you cannot merge safely.

Part 14 — Security, fraud and data quality

1. **Use your own login.** Every action is recorded against your name.
2. **Verify identity before changing a phone number.** The phone is the family login and the sibling key. Ask for the old number or an ID.
3. **Do not move a child between families on a verbal request alone.** Ask for written evidence or management approval.
4. **Do not confirm a transfer you have not seen** in the bank or Paystack.
5. **Do not share receipts or statements** with anyone who is not the parent or an authorised staff member.
6. **Do not delete or edit a posted payment.** Use the reversal/correction flow and record why.
7. **Keep the source files.** For every import, keep the CSV, the batch number and the rows CSV.
8. **Log out** on shared computers and at the end of the day.
9. **Do not install browser extensions or save the school password** on a shared machine.

Part 15 — Quick reference

15.1 Where everything is

TASK	PATH
Find a pupil	Admissions → **Students**
Find a parent / family	Admissions → **Parents**
Family notices	Parents → **Family updates**
Add a child to a family	Parents → **Manage family** → **Add a pupil to this family**
New pupils from CSV	Admissions → **Bulk Import**
Fees already collected	Finance → **Fees Import**
Fee amounts per class	Finance → **Fee Schedule**
Bill ledger / open an invoice	Finance → **Invoices**
Assign a scholarship	Finance → **Discounts**
Take cash / generate a slip	Finance → **Payment Terminal**
Verify a transfer	Finance → **Verify Payments**
Money with no bill	Finance → **Unmatched Transfers**
Parent paid ahead	Finance → **Advance Payments**
Receipt reprint	Reports → **Payment Register**
Debtors	Reports → **Outstanding Fees**
Today's totals	Reports → **Daily Collections**
Expenses	Finance → **Expenses**
Income vs expenditure	Finance → **Income & Expenditure**

15.2 Fees Import CSV — the eleven columns

```
Admission Number,First Name,Middle Name,Surname,Class Name,Student Type,Amount Paid,Payment Date,Payment Method,Payment Reference,Note
24/001,John,,Doe,JSS 1A,NEW,37500,2026-09-15,CASH,RC-1042,First instalment collected at the office
24/002,Aisha,,Bello,JSS 1A,RETURNING,50000,2026-09-15,TRANSFER,TRX-9981,Full term paid
24/003,Halima,,Musa,JSS 1A,RETURNING,0,,,
```

> `Amount Paid` is the **total** collected for the term. The third row has paid nothing and will be posted as **UNPAID**. A pupil with no surname can leave **Surname** blank and fill **Middle Name**. Edus matches on the admission number, then First Name plus either Middle Name or Surname — the two are interchangeable.

15.3 Status meanings

STATUS	MEANING
Preview only	The file has been read; nothing is posted
Posted	The valid rows created payments and invoices
Reversed	The batch was undone; nothing from it is posted

STATUS	MEANING
PAID	Invoice fully settled
PARTIAL	Some money received, balance remains
UNPAID	Nothing received
Pending	A transfer/slip is waiting for the bursar to verify
Confirmed	The bursar verified the money
Advance	Money held for the pupil's next bill

15.4 One-page desk checklist

- [ ] Search the parent by phone before creating anything.
- [ ] Check the child's class and Student Type.
- [ ] Preview every Fees Import; never post unseen.
- [ ] One posted opening-balance batch per term.
- [ ] Assign scholarships before billing.
- [ ] Count cash; confirm only money seen in the bank.
- [ ] Give/print the receipt.
- [ ] Clear Verify Payments and Unmatched Transfers daily.
- [ ] Keep the CSV and the batch number.
- [ ] Log out.

Part 16 — Training exercises (sign-off)

Do these on a **training tenant**. Do not post test data on the live school.

#	EXERCISE	EXPECTED RESULT
1	Search a parent using `0803…`, then `803…`, then the last 4 digits	The same parent appears each time
2	Add **ALH** to a test parent and save	The form saves; reopen Edit and **ALH** is still selected
3	Edit a parent's phone to a number held by another parent whose child shares a surname	The merge preview appears; tick confirm; children end up under one parent
4	Edit a parent's phone to a number held by an unrelated family	Nothing saves; the message names the other children
5	Add a pupil from another family to the correct parent	The pupil moves; the parent gets a notice
6	As the parent, report the notice with a note	The staff **Family updates → Reported by parents** shows the note
7	Set a pupil to **Returning** and save	The profile shows Returning
8	Download a class roster, fill three rows (part payment, full payment, zero), preview	The summary shows due, collected and outstanding; nothing is posted
9	Post the batch	Status Posted; the three invoices show PAID/PARTIAL/UNPAID correctly
10	Upload the same file again	The existing preview/batch is reused or reported as already posted; no duplicate payments
11	Trainer/super-admin reverses the batch (training only)	Payments removed; invoices restored; status Reversed
12	Type `37,500` in Amount Paid and preview	The row is rejected with the thousands-separator message
13	Assign a 50% scholarship, then import that pupil	Due is reduced; the preview shows the scholarship label
14	Take a cash part payment	Receipt opens; the invoice becomes PARTIAL
15	Verify a pending transfer with a different bank amount	The confirmed amount is the bank amount; the invoice balance updates
16	Run **Daily Collections** and **Payment Register** for today	The day's payments appear; a receipt can be reprinted
17	Export **Outstanding Fees**	The debtor list downloads and agrees with the pupil balances
18	Tick **Apply to grand total** on a 100% rule with pupils already on it	Every open bill on that rule becomes **₦0** and PAID; **REVOKE** restores the gross bill
19	Edit a rule's value from 10% to 20%	Every open bill using it re-prices immediately; a bill with money already paid does not change
20	Create a temporary unused rule, then delete it; try to delete an assigned rule	The unused rule is deleted; the assigned rule is refused with a “revoke it from those pupils first” message

Sign-off

NAME	ROLE	MODULES COMPLETED	TRAINER	DATE

End of playbook. Keep the source CSV of every import and the batch number with your term records.
